

Endocrinology Research and Practice is Climbing the Stairs One by One

EDITORIAL

Endocrinol Res Pract. 2024;28(3):137

Dear Readers,

The hot summer days have arrived again. After a long and exhausting year, people are making holiday plans. On the other hand, for many academicians, summer days are when we can devote more time to academic activities due to the decrease in educational obligations and unite with our computers. I hope our readers do not forget to enjoy these days and nights that pass by so quickly.

I would like to share some good news with you that has delighted our team. The 2023 Cite Scores and Impact Factors have been announced, and *Endocrinology Research and Practice* has increased its CiteScore to 0.5 and achieved an Impact Factor of 1.2. Although it is only an increase of 0.1 points in CiteScore, considering this as another step on the stairs we are climbing on our journey towards academic recognition and excellence, we believe it is critical. Obviously, we have many more steps to climb, but as they say, starting is half the battle. The contribution of our editorial board, reviewers, authors, and readers to this success is significant. We thank you for being a part of this long academic journey.

In our July issue, you will find quite rich content. Besides various original articles and case reports, you will find an excellent review by Doğruel, Aydemir, and Sarı on the topic "Evaluation of Mild Hyperglycemia During Early Pregnancy," a subject we frequently encounter in our daily practice. You will also find another interesting review by Eren and Öz Gül on the increasingly imperative concept of Diabetic Osteodystrophy.

Enjoy reading.

Murat Faik Erdoğan^{1,2}
