

October Issue Comes with Unmet Needs in Hypoparathyroidism, Current Pipeline Agents and More...

EDITORIAL

Endocrinol Res Pract. 2024;28(4):196

Dear Reader,

Here we are back on the stage with the October 2024 issue, Endocrine Research and Practice is ready with five original articles, three interesting case reports, and an outstanding invited article from Dr. Furkan Burak in this issue.

Dr. Burak is an endocrinologist and faculty member from a leading translational immuno-metabolism research group at Brigham and Women's Hospital/Harvard Medical School and basic science researcher at Harvard Chan School of Public Health (HSPH), Department of Molecular Metabolism. He contributed to the obesity and immunometabolism field with high-impact publications. Although his research and clinical practice focus on obesity, diabetes, and immunometabolism, he has contributed to the field of endocrinology in drug development and has licensed U.S. patents. Dr. Burak is a member of the Mass Health Drug Utilization Review Board. Thus, our young colleague is a hero in translational medicine and teaches bedside medical innovation at Harvard Medical School and MIT (Health, Science, Technology Program). Dr. Burak kindly sent us an update on 'Clinical Unmet Needs in Hypoparathyroidism and Current Pipeline Agents' which I believe you will enjoy deeply.

It has been quite a while since the WHO announced that the COVID-19 pandemic is over, however, we are still dealing with the long-term morbidity and vaccination issues of our new virus. You will find two nice articles on; vertebral fractures, the long-term mortality of COVID-19 patients and the Impact of vaccination on, fatality and ICU admission in Type 2 Diabetics.

A nouvelle assistant method, lymph node ACTH washout for localizing the Source of Ectopic ACTH Secretion, had also been described by Gürlek et al in this issue.

On behalf of our Editorial Team and the Reviewers who worked vigorously, I hope you enjoy the Issue.
